## INTRODUCTION

This Index is a subject guide to the major articles published in 400 British technical journals in 1963. It comprises about 30,000 entries arranged in a single alphabetical sequence of subject headings, together with supporting references.

### *Subject Scope*

The Index embraces all departments of Engineering and Chemical Technology, together with the various Manufacturing Processes based upon them. The distinction between Pure and Applied science is often extremely difficult to use as a basis for selecting or classifying literature, and although this *Index* is centred upon applied science it also includes a great deal of material on the pure science (i.e. the physics or chemistry) of man-made objects and industrial processes. Instruments of all kinds are covered, irrespective of whether their field of application is in pure or applied science. Articles on the chemistry of individual substances are also indexed, as it is only very rarely possible to assert that a chemical species is entirely without technical interest. The *Index* does not cover Industrial Economics, but it does contain references to articles of a mixed technical-economic character. These are invariably signalled by the subheading 'Industry' as opposed to the more usual 'Manufactures' or 'Production' for the technical processes. Technology also overlaps the field of Management at several points, and here the policy of the *Index* is to include from the management sphere only material on such physical and statistical techniques as work study, ergonomics and operational research. Finally, it should be mentioned that the *Index* omits the applied biological sciences from its purview. Here again a number of borderline subjects are included. For instance, the production technology and the chemistry of food, drugs and pesticides are covered, but the physiological chemical aspects are excluded.

### *Index Structure*

The *Index* is designed primarily as a reference tool for tracing articles on highly specific topics. For this purpose the headings are detailed and generally co-extensive with the subjects of the articles listed.

The basic method of index construction may be illustrated by the treatment of such a subject as 'Bleaching Cotton by hydrogen peroxide'. A

single entry is made with supporting references, as follows:

**COTTON, Bleaching, Hydrogen peroxide.**

**HYDROGEN PEROXIDE, Bleaching, Cotton.**

See COTTON, Bleaching, Hydrogen peroxide

**BLEACHING, Cotton.** See COTTON, Bleaching

Additional facilities are given in two situations. When the first two elements of a heading are in the relation of Whole and Part, as in SHIPS, Diesel engines or MOTOR CARS, Bodies, then a second permuted entry (DIESEL ENGINES, Ships and BODIES, Motor cars) is given under the term representing the Part. This is considered desirable because interest in a particular component may often ignore the more comprehensive unit of which it forms a part. Considerations of a similar character arise in connection with Processes and Applications. The *Index* normally enters under the Application with a reference from the Process. There is a case for substituting a second entry for the reference, but it is felt to be less strong than the case for double entry for Whole-Part and Part-Whole, and it is not possible to have double entry for both in view of economic limitations on the size of the *Index*. The second occasion for the use of double entry is the subject which is a proper name, such as the name of a teaching or research institution, or the name of a prominent structure (realised or unrealised) such as the CHANNEL TUNNEL or FORTH ROAD BRIDGE. In these cases, entries are given both under proper name and under the term for the subject illustrated (e.g. BRIDGES, Suspension and TUNNELS).

In this *Index*, the subjects are entered directly into the alphabetical sequence, and not as sub-headings of more general terms, *as long as they can stand alone with unequivocal meaning*, corresponding to the subject of the article. Thus DRY ROT is entered directly under D, and not under WOOD, Pests (though the latter is a perfectly good heading for an article on Wood pests generally. However, an article on Dry rot in plywood, would be entered as PLYWOOD, Dry rot. The purpose here is again to facilitate specific topic searching. Though the *Index* is necessarily a cumbersome tool for broad field searching it has been thought desirable to signpost some varieties of subject relationship. *Index* users often discover pertinent material under a term narrower in meaning than that which they consulted first as approach term. Inquirers primarily interested in a particular application of a process may find useful information on other applications of the same process to parallel situations.

Relational signposting in the *Index* is carried out by references of two kinds. In the first place there are "Related heading" references which refer from more to less general terms. A number of classification schemes have been pressed into service in this connection. Not all of the various hierarchical steps are everywhere included. Thus the names of the various plastics are given as references at Plastics, and not via such intermediate groupings as Synthetic Resin Plastics, and Condensation Polymerised Plastics, though occasionally articles will appear covering these relatively generalised concepts. The "related heading" network for Chemistry is of the simplest kind, pending more fundamental work on classification in this field. No attempt is made to link the various inorganic chemicals, and for organic chemicals only the intermediate concepts "Aliphatic" and "Cyclic" and "Heterocyclic" are brought into the system of references. It may be possible with more experience to clothe this skeleton. For reasons of space no references are given between subheadings under the same main heading (e.g. AIRCRAFT, Engines and AIRCRAFT, Gas turbines). To compensate for this absence brief systematic synopses have been added at the beginning of certain of the longer sequences of subheadings.

The other relation-indicating mechanism is inherent in the system of inversion references, of which an example has already been given for

COTTON, Bleaching, Hydrogen peroxide.

The person searching for this subject may also be marginally interested in (a) Hydrogen peroxide, (b) Hydrogen peroxide bleaching, (c) Bleaching of other cellulosic fibres. The routine instruction is simply to note the sub-heading terms and then look them up in the main sequence. Thus at HYDROGEN PEROXIDE will be found entries for material in this substance in general and on its use for bleaching generally: there will also be references locating headings on its particular applications and the hydrogen peroxide bleaching of particular substances. At BLEACHING will be found entries for articles on bleaching generally, and references to headlines on the bleaching of individual substances.

### *Order of Elements in Headings*

Most of the subjects indexed are composite in that they cannot usually be expressed in a single word or phrase. The question therefore arises as to which of the various verbal elements required for the heading shall be entry word and generally as to the order of the other elements in the heading.

The order of verbal elements or components is normally so devised that an account of a process applied to a particular application is placed under the term for the Application. Another invariable

rule is that the various word-elements are arranged left to right in order of decreasing concreteness with the most concrete element as the entry word. There are many situations in which recognisable differences in terms of concreteness and abstractness may not be apparent, and a number of rules have been devised for the indexers which regulate heading component order through a consideration of the relationships between the components. The following table illustrates the more commonly used heading constructions and their natural language equivalents.

### *Compounds which specify a particular type or variety of Thing or Material:*

<i>Heading and subheading</i>	<i>Natural language</i>
1. THING <sub>1</sub> , Thing <sub>2</sub> CONVEYORS, Roller	Conveyors with Rollers
2. FUNCTION, Thing PRINTING, Inks	Inks for Printing
3. THING <sub>2</sub> , Thing <sub>1</sub> BUSES, Garages	Garages for Buses
4. THING, Property FABRICS, Coated	Fabrics with Coating
5. THING <sub>2</sub> , Thing <sub>1</sub> , TURBINES, Rotors THING <sub>1</sub> , Thing <sub>2</sub> ROTORS, Turbines	Rotors of Turbines

### *Compounds denoting Actions or Properties of Things or Materials:*

6. THING, Property BEAMS, Strength	Strength of Beams
7. THING, Action upon it IRON, Corrosion	Corrosion of Iron
8. THING <sub>1</sub> , Action upon it, Thing <sub>2</sub> METALS, Forming, Magnetic pulse	Forming of Metals by Magnetic pulses
9. THING, Action upon it, Byproduct PHTHALIC ANHY- DRIDE, Production, Tail gases	Tail gases as byproduct of Production of Phthalic anhydride
10. THING, Its Action LASERS, Welding	Welding by Lasers

### *Other compounds*

11. ACTION <sub>2</sub> , Action <sub>1</sub> PACKAGING, Label- ling	Labelling for Packaging
----------------------------------------------------------------------------	-------------------------

12. MATERIAL, Diversified role  
 PLASTICS, Building materials      *Plastics as Building materials*

N.B.—The subscript figures refer to order in English natural language using prepositions to indicate relationships. The term THING in examples 1–10 includes Materials.

These rules, taken separately or in combination, account for a high proportion of the indexing problems met. It is hoped to amplify them in due course, thus bringing under control the few exceptions which the Index at present contains.

### ***Indexing of Locality terms***

A high proportion of the articles indexed deals with objects or activities at particular places. It is of course possible to decide in a general way that the place is or is not significant, but as usual there is a great number of debatable intermediate cases. The radical solution of indexing place in all such cases is ruled out on grounds of space and economics. The practice adopted is as follows:

(1) An article surveying comprehensively the methods practised in a particular country, or a particular species of product produced in a particular country, receives a reference from the country (and from the continent in the case of Africa and South America).

(2) An article dealing with an individual factory or its products does not normally receive a reference from place. Individual structures are not usually specified and referenced by locality, except in the following instances.

*Housing*  
*Flats, Maisonnets*  
*Churches, Monasteries and similar buildings*  
*Government and municipal buildings*  
*Town planning topics*  
*Mines*  
*Pipelines*  
*Power stations (including Nuclear and Hydroelectric)*  
*Dams*  
*Coastal and Flood control works, Drainage, Water engineering*  
*Roads*  
*Buildings connected with transport.*

### ***Ambiguity in headings***

The use of relational criteria in constructing headings goes some way towards reducing ambiguity of index headings. However, the omission of the actual relational terms or phrases can still occasionally lead to uncertainty of interpretation. Often this uncertainty is of a kind that matters little for information retrieval purposes. The heading

METALS, Extrusion, Presses

can mean that the article is about the extrusion by the press or it can be about the press which extrudes. It is doubtful if ambiguity of this kind

is of great practical importance. To distinguish an action, part or property, from the use of an action part or property term to denote a particular kind, e.g. Paint, Stoving—the stoving of paint, and Paint, Stoving, i.e. Stoving paints, the *Index* uses parentheses around a type-specifying word where the distinction seems required. The parentheses have the same sorting value as the commas which they replace.

### ***Journals covered***

A list of the journals covered by this volume of the Index, together with their publishers' addresses, is to be found at the end of the book. It includes some titles no longer in existence. Society publications simply entitled *Journal of . . .*, *Proceedings of . . .*, or *Transactions of . . .* are entered in the list under the name of the society. (In Index citations these journal titles are given in the form used in the journal itself, with the abbreviations shown on page ix.)

Thanks are due to the publishers of many of these journals for supplying copies for indexing and so expediting the work.

### ***Selection of articles for the Index***

An attempt has been made to select the more substantial articles published in the journals listed, though no evaluative criteria have been employed. The following types of material are normally excluded: (1) articles comprising less than a page of text and/or diagram in the usual format and typography, (2) brief resumés of symposia and conferences, (3) accounts of exhibitions, and other articles which consist of enumerative descriptions of a variety of products, (4) regular miscellany features, (5) students' features, (6) letters, (7) notes, (8) discussions, (9) book reviews other than essay reviews and review articles.

### ***Indexing unit***

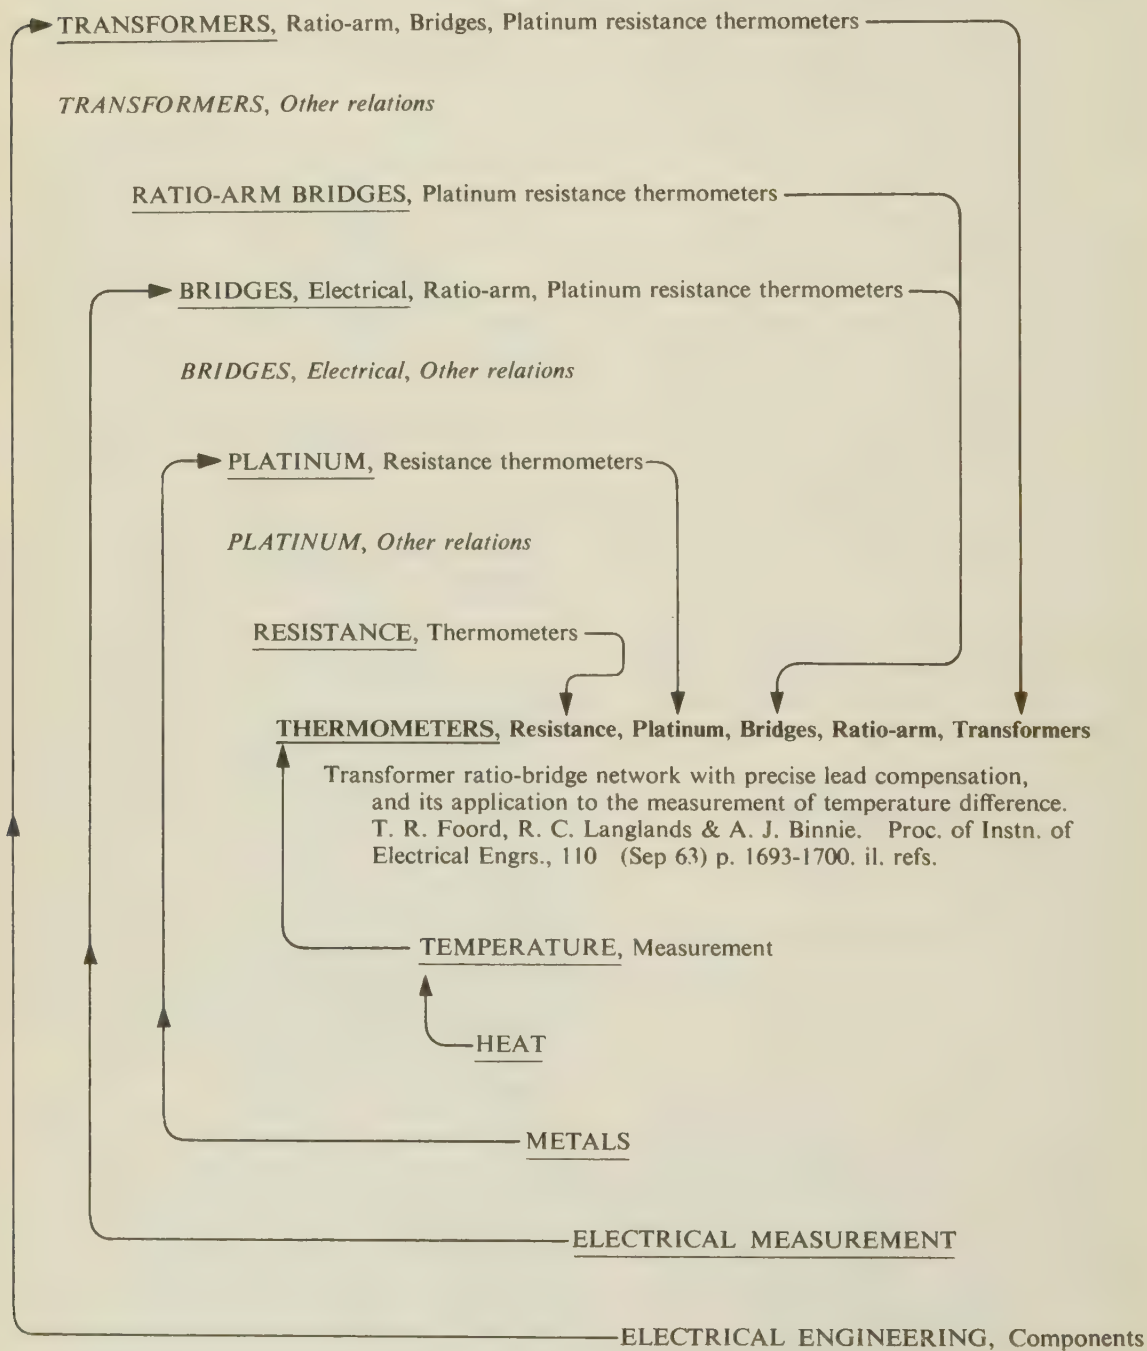

The unit of material indexed is the individual article or the part of an article which appears in a single issue of the journal. The various parts of an article published over several issues are therefore not all given the same heading where they are individually distinctive in subject matter.

### ***Synopses***

Brief systematic synopses are provided in some cases where there are long sequences of sub-headings under the same main heading. They are included because no connective references are supplied between sub-headings under the same main heading. They also afford a much simplified bird's eye view of the scope and ramifications of the material indexed under the headings concerned. The terms which are italicised in the synopses are found in their *direct* alphabetical position in the sequence of sub-headings. The terms printed in roman in the synopses are grouping terms only.

# DIAGRAM TO ILLUSTRATE INDEX STRUCTURE

Any of the underlined approach terms can be used for tracing an article on transformer ratio-arm bridges used in connection with platinum resistance thermometers. The arrowed lines represent cross references.

## FABRICS, Acrilan

Acrilan in the woven fabric field. Textile Recorder, 80 (Apr 63) supplement p.3-5. il.

Dominant A: Acrilan chosen for both fleece and high pile. Man-Made Textiles, 40 (Apr 63) p.77-82. il.

## FABRICS, Acrilan, Tufted

Fine gauge tufters prefer Acrilan. Man-Made Textiles, 40 (Jan 63) p.63. il.

## FABRICS, Acrilan, Tufted, Manufactures

Technique of tufting Acrilan. L. O'Toole. Man-Made Textiles, 40 (Jan 63) p.64-7. il.

## FABRICS, Acrilan—Worsted, Finishing

Finishing Acrilan/worsted fabrics by the Chemmax finishing routine. Man-Made Textiles, 40 (Nov 63) p.57-62. il. refs.

Finishing conditions of Acrilan worsted fabrics. A. D. Rosenberg. J. of Textile Inst., Proc., 54 (Jul 63) p.146-55. refs.

## FABRICS, Acrylic fibres

European success for German acrylic. H. Wild. Skinner's Record, 37 (Sep 63) p.766-7. il.

## FABRICS, Blended

Relations between cloth, yarn and fibre properties with particular reference to blended cloths. G. E. Chadwick, J. Pollitt & H. M. Taylor. J. of Textile Inst., Proc., 54 (Jul 63) p126-34. il. refs.

## FABRICS, Cashmere—Wool, Weaving

Cashmere and wool mixtures. "Portex". Wool Record, 103 (8 Mar 63) p.37+. il.

## FABRICS, Cellulose triacetate, Knitted

Textured triacetate knit fabrics. Dyer, Textile Printer, Bleacher & Finisher, 229 (22 Feb 63) p.263

## FABRICS, Cellulosic, Bleaching, Sodium chlorite

Bleaching with sodium chlorite: recent progress on cellulose materials. A. J. Hall. Textile Weekly, 63 (25 Oct 63) p.826+

## FABRICS, Cellulosic, Continuous preparation

Continuous preparation of cellulosic-and synthetic-fibre fabrics. R. S. Higginbotham. J. of Soc. of Dyers & Colourists, 79 (Sep 63) p.412-17. il. refs.

## FABRICS, Cellulosic, Crease resistant

Improvement in crease-resistant fabrics. Textile Weekly, 63 (2 Aug 63) p.193-4

## FABRICS, Cellulosic, Dyeing

Dyeing of cellulosic materials. D. M. Nunn. Textile Recorder, 81 (Jun 63) p.73-6

## FABRICS, Cellulosic, Dyeing, Procion dyes

Modern practice in continuous dyeing of cellulosic fibres with Procion dy. s. J. A. Fowler. Textile Recorder, 81 (Dec 63) p.55+. refs.

## FABRICS, Cellulosic, Finishing, Epoxy resins

Epoxides and their use in the textile industry, pt.2. D. M. Hall & B. J. Reuben. Textile Recorder, 80 (Jan 63) p.53-5. il. refs.

## FABRICS, Check, Fancy, Weaving

Fancy check design in single cloths. A. J. Bennett. Textile Manufacturer, 89 (Feb 63) p.58-9. il.

## FABRICS, Clothing. See CLOTHING, Fabrics

## FABRICS, Coated (P.V.C.) Thickness, Measurement, Beta gauges

Web thickness control by beta-ray. J. T. Laing. International Plastics Engng., 3 (Sep 63) p.351-4. il.

## FABRICS, Coated, Polythene, Laminating

Laminating polythene film to coarse fabrics. Rubber & Plastics Weekly, 144 (5 Jan 63) p.10. il.

## FABRICS, Containers, Food. See FOOD, Containers, Fabric

## FABRICS, Cords, Tyres, Motor vehicles. See MOTOR VEHICLES, Tyres, Cords, Fabrics

## FABRICS, Cord, Weaving

Cloth construction: ribs and cords. A. J. Bennett. Textile Manufacturer, 89 (May 63) p.186-7. il.

## FABRICS, Costumes. See COSTUMES, Fabrics

## FABRICS, Cotton

Cotton fights back: new processing techniques provide answer to inroads of the synthetics. W. M. Segall. Hosiery Times, 36 (Oct 63) p.38+

## FABRICS, Cotton, Bleaching

Textile producers introduce continuous bleaching and finishing range [Hyde plant of Ashton Bros. & Co. Ltd.] Textile Recorder, 81, (Nov 63) p.92-3. il.

## FABRICS, Cotton, Crease resistance, Recovery-strength relationship

Recovery/strength relation of treated cottons. J. T. Marsh. Textile Manufacturer, 89 (Jun 63) p.248-51. il.

## FABRICS, Cotton, Dyeing

Progressive dyeing and finishing concern. Textile Recorder, 80 (Jan 63) p.56-8. il.

## FABRICS, Cotton, Dyes, Azo compounds, Effect of finishes

Effect of finishing agents on azoic dyeings. R. W. Moncrieff. Dyer, Textile Printer, Bleacher & Finisher, 130 (15 Nov 63) p.729-30. ref.

## FABRICS, Cotton, Elastic

Stretch cottons. W. A. Reeves. Textile Recorder, 81 (May 63) p.56+. il. refs.

## FABRICS, Cotton, Finishing

Textile producers introduce continuous bleaching and finishing range [Hyde plant of Ashton Bros. & Co. Ltd.] Textile Recorder, 81 (Nov 63) p.92-3. il.
